

**CLIPSO takes you twenty thousand leagues under the sea!**

POLYMIDI, an engineering firm specializing in the design of top-of-the-range campsites, leisure parks and other entertainment sites, called on the expertise of SIGNAL, a specifier and installer of CLIPSO® solutions, to create ultra-modern, illuminated printed ceilings. They were specially designed for the new sanitary blocks of the tent village «Domaine de la Rive», CIELA VILLAGE group\*\*\*\*, located in Biscarrosse in the Landes.

480 m<sup>2</sup> of deep sea printed on a diffusing fabric

An aquatic universe for common areas worthy of the greatest resorts.

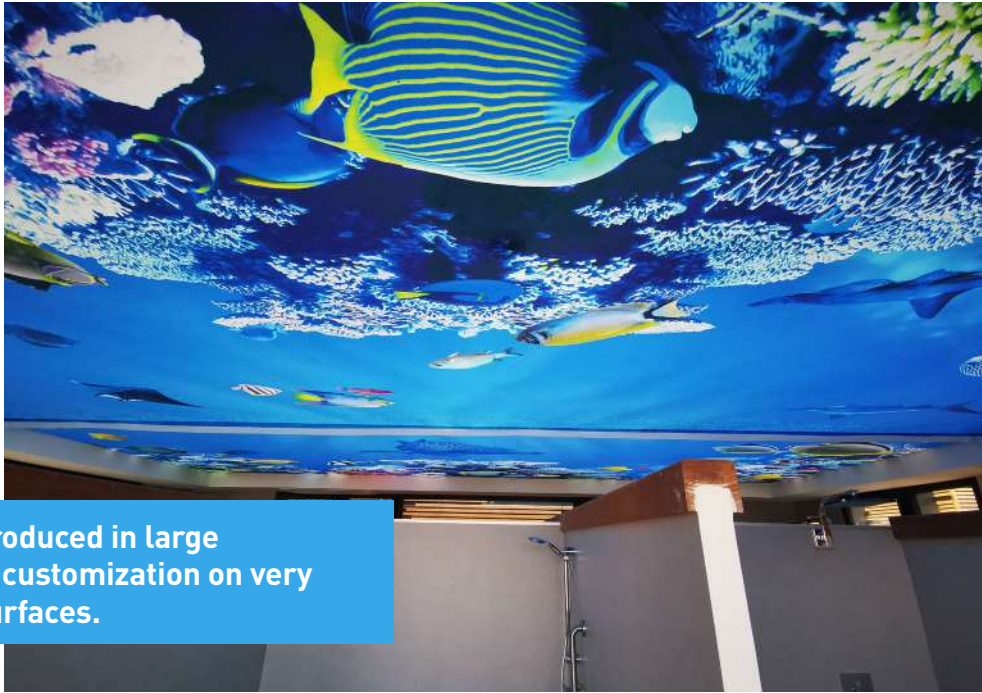

**When you look up, it's off to a dive into the deep sea to discover a wide variety of species and fluorescent corals. This strikingly realistic rendering, with a perfect illusion, was produced using HD digital printing on CLIPSO® translucent fabric.**

## SO LIGHT by CLIPSO

In the form of wooden huts on the outside, the interior of the 6 new sanitary blocks and two technical rooms offers an extraordinary immersive experience from the moment you enter!

**480 m<sup>2</sup> of 308T diffusion fabric** were printed and installed on profiles by CLIPSO to create this exceptional encounter, a shimmering journey with a wealth of life below the surface.

The coating produced in large widths allows customization on very large-scale surfaces.

The tests were numerous, but the optical illusion is perfect and the result most conclusive thanks to **HD digital printing on CLIPSO's SO LIGHT translucent fabric (50% diffusing fabric + 15% printing)**, combined with LEDs installed behind the fabric.

The image processing, the study of the cabling and the lighting with **COB 905 led lighting modules from MATEL**, i.e. 4 modules of 660 lm / m<sup>2</sup> for a lux rendering of 950 lm / m<sup>2</sup> were carried out by the POLYMIDI firm in Lafrançaise (82).

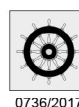

The installation was carried out by SIGNAL, a CLIPSO partner for many years, by 3 people in 5 weeks on site. The installation at room temperature, which was quick, clean and without any nuisance, allowed for an optimization of the work schedule.

**A real immersion chamber, the script was completed by sound and diffusers of marine or woody scents depending on the atmosphere. Welcome to twenty thousand leagues under the sea!**
